working together

Who we are

INDUNIV's unique collaboration model between industry, academia and government has advanced the development of Puerto Rico's knowledge economy during the past 25 years. This collaboration has led to the creation of one of the strongest life sciences centers of manufacturing in the world. INDUNIV is now leading the way beyond manufacturing.

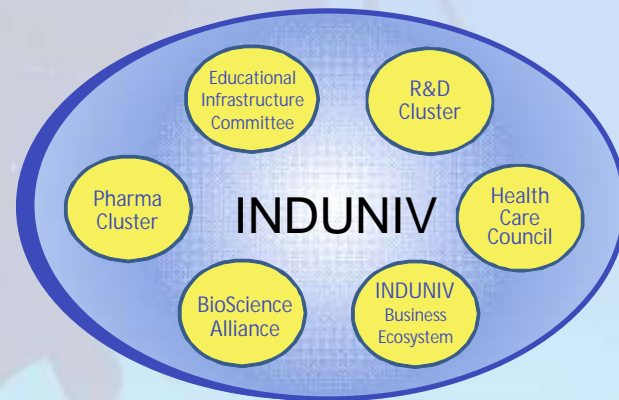

Our work has contributed to the creation of a Life Sciences Roadmap to continue evolving a strong ecosystem that fosters innovation and value; the building and operation of the Material Characterization Center; the Bioprocess Development & Training Complex; the establishment of a Bioscience Week every September to promote the public's engagement with the field; and fostered research through the Scientific Affairs Committee cycle of R&D grants.

INDUNIV achieves its work through five clusters, each combining leaders in industry, academia and government to advance our vision and mission in key areas for the development of the Life Sciences Ecosystem.

I N D U N I V

Our vision

Puerto Rico is the preferred location for new business opportunities through knowledge creation in the pharmaceutical, biotechnology, medical devices, health care and allied industries.

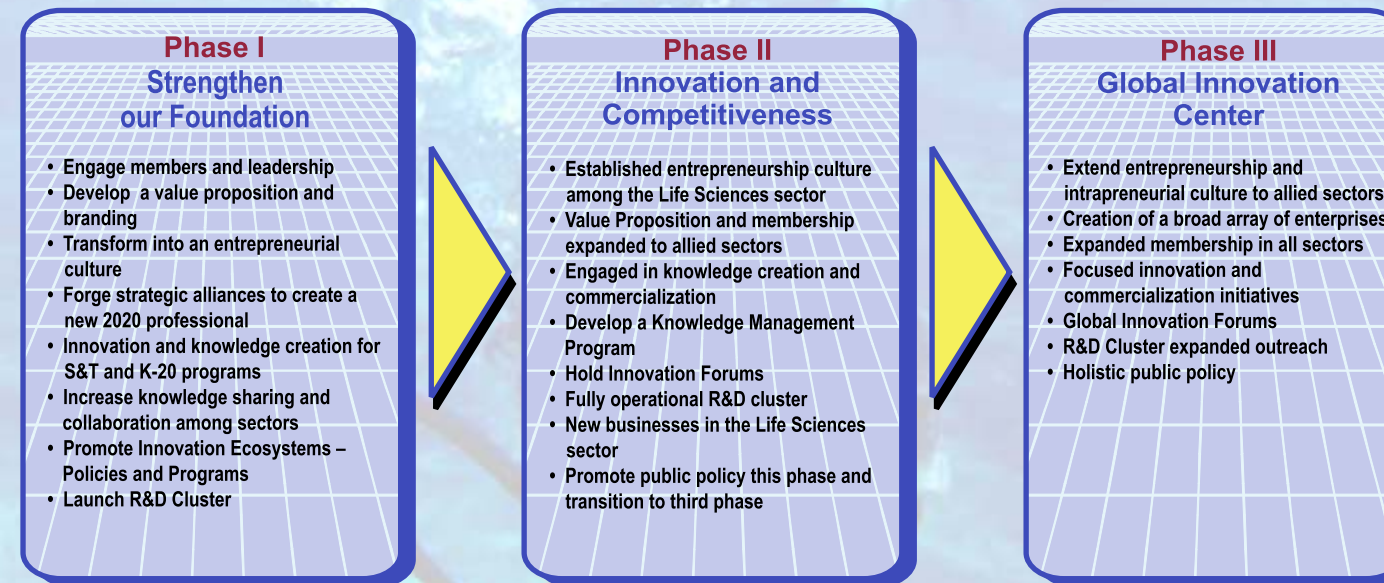

INDUNIV develops and facilitates the Life Science cluster ecosystem in Puerto Rico to advance the knowledge economy

Life Science Catalyst

INDUNIV has sustained and strengthened Puerto Rico's position as one of the strongest Life Sciences Centers in the world for pharmaceutical, medical devices and biotechnology industries. As these industries undergo profound transformations, INDUNIV integrates industry, academia and government to drive Puerto Rico's global competitiveness with a Life Science Roadmap that focuses on value creation.
